Class 9, Chapter 10, Exercse 5.3

Q7. $\angle PQR = 100^{\circ}$, where **P**, **Q** and **R** are points on a circle with centre **O**. Find $\angle OPR$

Solution: Let, we have a unit circle with center at origin, i.e. $\mathbf{O} = \begin{pmatrix} 0 \\ 0 \end{pmatrix}$, and radius r = 1. The points \mathbf{P}, \mathbf{Q} and \mathbf{R} are on the circle with center \mathbf{O} and radius r = 1, such as

$$\mathbf{P} = \begin{pmatrix} \cos 160^{\circ} \\ \sin 160^{\circ} \end{pmatrix} \tag{1}$$

$$\mathbf{Q} = \begin{pmatrix} \cos \theta \\ \sin \theta \end{pmatrix} \tag{2}$$

$$\mathbf{R} = \begin{pmatrix} \cos 0^{\circ} \\ \sin 0^{\circ} \end{pmatrix} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \tag{3}$$

$$\implies \mathbf{PQ} = \mathbf{Q} - \mathbf{P} = \begin{pmatrix} \cos \theta - \cos 160^{\circ} \\ \sin \theta - \sin 160^{\circ} \end{pmatrix}$$
 (4)

$$\implies \mathbf{Q}\mathbf{R} = \mathbf{R} - \mathbf{Q} = \begin{pmatrix} 1 - \cos \theta \\ 0 - \sin \theta \end{pmatrix} \tag{5}$$

As per given condition, we have

$$\angle PQR = 100^{\circ} \implies \cos 100^{\circ} = \frac{\mathbf{PQ}^{\mathsf{T}}\mathbf{QR}}{\|\mathbf{PQ}\|\|\mathbf{QR}\|}$$
 (6)

(7)

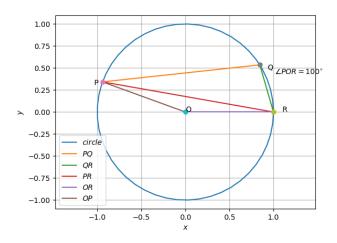

Fig. 1: circle

Now, we'll find the $\angle OPR$,

$$\mathbf{OP} = \mathbf{P} - \mathbf{O} = \begin{pmatrix} \cos 160^{\circ} - 0 \\ \sin 160^{\circ} - 0 \end{pmatrix} = \begin{pmatrix} \cos 160^{\circ} \\ \sin 160^{\circ} \end{pmatrix}$$
(13)

$$\mathbf{OR} = \mathbf{R} - \mathbf{O} = \begin{pmatrix} 1 - 0 \\ 0 - 0 \end{pmatrix} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \tag{14}$$

$$\implies \angle OPR = \arccos\left(\frac{\mathbf{OP}^{\mathsf{T}}\mathbf{OR}}{\|\mathbf{OP}\|\|\mathbf{OR}\|}\right) \tag{15}$$

$$=\arccos\left(\frac{\cos 160^\circ + 1}{\sqrt{2}}\right) \tag{16}$$

$$=20.87^{\circ}$$
 (17)

$$\|\mathbf{PQ}\| = \sqrt{(\cos \theta - \cos 160^\circ)^2 + (\sin \theta - \sin 160^\circ)^2}$$
(8)

$$\|\mathbf{Q}\mathbf{R}\| = \sqrt{(1 - \cos \theta)^2 + (0 - \sin \theta)^2}$$
 (9)

$$\mathbf{PQ}^{\mathsf{T}}\mathbf{QR} = -1 + \cos\theta + \cos 160^{\circ} - \theta \tag{10}$$

Using (6), (8), (9) and (10), we get

$$\theta = 32.31^{\circ} \tag{11}$$

$$\mathbf{Q} = \begin{pmatrix} \cos 32.31^{\circ} \\ \sin 32.31^{\circ} \end{pmatrix} = \begin{pmatrix} 0.999 \\ 0.032 \end{pmatrix} \tag{12}$$
